## CHAPTER - 3

## PLAYING WITH NUMBERS

## MODULE - 1/2

## INTRODUCTION:

$>$ Let us take 6 marbles. What are the possible ways of arranging them in rows?
$>$ If we arrange 1 in each row, there are 6 rows. 2 in a row then there are 3 rows, 3 in a row then there are 2 rows and 6 in a row there is only 1 row.
$>6$ can be written as the product of two numbers in different ways: $6=1 \times 6 ; 6=2 \times 3 ; 6=3 \times 2 ; 6=6 \times 1$
$>1,2,3$ and 6 are exact divisors of 6 and 6 is the multiple of $1,2,3$ and 6 .

## FACTORS:

$\Rightarrow$ A factor of a number is an exact divisor
$>1$ is a factor of every number
$>$ Every number is a factor of itself
$>$ Every factor is less than or equal to the given number
$>$ Number of factors of a given number are finite

## MULTIPLES:

$>$ A number is a multiple of its factors
$>$ Every multiple of a number is greater than or equal to that number
$>$ Number of multiples of a given number is infinite
$>$ Every number is a multiple of itself

## PERFECT NUMBERS:

$>$ A number for which the sum of all its factors is equal to twice the number is called a perfect number
$>$ e.g. Factors of 6 are $=1,2,3$ and 6
$1+2+3+6=12=$ Twice the number 6

## PRIME NUMBERS AND COMPOSITE NUMBERS:

> The number 1 has only one factor (i.e. itself)
$>2,3,5,7,11$, etc are having exactly two factors 1 and the number itself
$>$ There are numbers $4,6,8,9,10,12$, etc having more than two factors

## THINGS TO REMEMBER:

$>1$ is neither prime nor composite
$>$ Prime numbers: Numbers (other than 1) with only two factors namely 1 and itself
$>$ Composite numbers: Numbers that have more than two factors

## SIEVE OF ERATOSTHENES METHOD:

$>$ Step 1: Cross out 1 because it is not a prime number.
$>$ Step 2: Encircle 2, cross out all the multiples of 2, other than 2 itself, i.e. $4,6,8$ and so on.
$>$ Step 3: You will find that the next uncrossed number is 3 . Encircle 3 and cross out all the multiples of 3 , other than 3 itself.
$>$ Step 4: The next uncrossed number is 5 . Encircle 5 and cross out all the multiples of 5 other than 5 itself.

Step 5: Continue this process till all the numbers in the list are either encircled or crossed out.
$>$ All the encircled numbers are prime numbers. All the crossed-out numbers, other than 1 are composite numbers. This method is called the Sieve of Eratosthenes.

| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | $1 Q$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 11 | 12 | 13 | 14 | 16 | 16 | 17 | 18 | 19 | $2 Q$ |
| 21 | 22 | 23 | 24 | 25 | 26 | 27 | 28 | 29 | $3 Q$ |
| 31 | 32 | 33 | 34 | 35 | 36 | 37 | 38 | 39 | $4 Q$ |
| 41 | 42 | 43 | 44 | 45 | 46 | 47 | 48 | 49 | $5 Q$ |
| 51 | 52 | 53 | 54 | 55 | 56 | 57 | 58 | 59 | 60 |
| 61 | 62 | 63 | 64 | 65 | 66 | 67 | 68 | 69 | 12 |
| 71 | 72 | 73 | 74 | 75 | 76 | 77 | 78 | 79 | $8 Q$ |
| 81 | 82 | 83 | 84 | 85 | 86 | 27 | 88 | 89 | $9 Q$ |
| 91 | 92 | 93 | 94 | 95 | 96 | 97 | 98 | 99 | $10 Q$ |

## THINGS TO REMEMBER:

$>2$ is the smallest prime number and is even
$>$ Every prime number other than 2 is odd
$>$ Two prime numbers whose difference is 2 are called twin primes

THANK YOU
