

ATOMIC ENERGY CENTRAL SCHOOL

CLASS – 6 PRACTICAL GEOMETRY WORK SHEET – 1

1. Which geometrical instrument used to draw line segments and to measure their lengths?
2. Which geometrical instrument used to draw perpendicular and parallel lines?
3. Which geometrical instrument used to compare lengths?
4. Which geometrical instrument is used to draw and measure angles?
5. Which geometrical instrument is used to mark off equal lengths but not to measure them and also to draw arcs and circles?
6. Name the geometrical instrument having a pair – a pointer on one end and a pencil on the other
7. Name the geometrical instrument having a pair of pointers.
8. Name the geometrical instrument having two triangular pieces.
9. Name the geometrical instrument having a semi-circular device graduated into 180 degree-parts.
10. A \_\_\_\_\_ is a simple closed curve all of whose points are at the same distance from a fixed point.
